

North Dakota Game and Fish Department Macro Native Grassland Conservation Areas

Native Grassland
Core Areas

Native Grassland
Complimentary Areas

The macro level native grassland conservation areas (NGCA) includes a core grassland component and a complimentary grassland component. The NGCA uses a 16 sq. mile neighborhood and identifies the percentage of the surrounding native grassland throughout the specified area. The core areas consist of $\geq 60\%$ native grassland and the complimentary areas consist of $\geq 20\%$ native grassland. These areas are crucial to multiple aspects of a large variety of wildlife.
