PROJECT DETAILS:

With generous funding from Purina and support from many other partners, Pheasants Forever has created a new Soil Health and Habitat Program. This program – focused in the prairie pothole region, aims to collaborate with farmers in North Dakota, South Dakota, Minnesota, and Iowa to help analyze 30,000 acres of precision ag data to rebuild soil health, sequester carbon, improve water quality, increase biodiversity and provide quality wildlife habitat on the least productive cropland acres while simultaneously improving profitability.

Eligible geography - Counties shaded green on map (left) in North Dakota known as the Prairie Pothole Region.

PROGRAM OPPORTUNITIES [Once Accepted]

- Precision Ag Data Analysis – Participating farmers agree to collaborate with Pheasants Forever and TruTerra LLC to analyze data for profitability and environmental stewardship benchmarking using the TruTerra Insights Engine. Eligible farmers must have at least 1 year of precision yield data through John Deere Operations Center, Climate Field View, or other precision platform and the farmer agrees to share the data with TruTerra.
For more information about TruTerra, please refer to:
www.truterrainsights.com/ or
www.youtube.com/watch?v=QAKkcYFI7ko
- Results from the precision analysis with assistance from TruTerra Insights Engine will guide the selection and prioritization of acres that could benefit the greatest by adoption of the Soil Health and Habitat program components. This is a farmer-led process, assisted by PF biologists and precision specialist. The Soil Health and Habitat Program includes:

Perennial wildlife habitat cover consisting of grasses and wildflowers designed by PF biologists:

- + Seed and establishment cost not to exceed \$150/acre based off actual receipts;
- + \$150/acre one-time sign-up incentive in ND & SD

Cover crop:

- + \$20/acre for cover crop seed cost-share

TERMS:

Contract length between farmer and Pheasants Forever for perennial habitat acres is 5 years. Haying & grazing outside of the primary nesting season is allowed as part of rebuilding soil health and incorporating livestock into the regenerative process. Funding available based on competitive application sign-up and batching period.
