While wild turkeys are common today over much of the state, these birds are not native to North Dakota. History tells us their original range extended only as far north as southern South Dakota and Minnesota. The first introductions of wild turkeys in North Dakota took place in the early 1950s.

MAY

Peak prairie chicken years in North Dakota were from 1900-1930, but by the 1960s, the state's population fell to an estimated 4,000-5,000 birds. Small prairie chicken populations remain today in southeastern North Dakota and in Grand Forks County where this bird was photographed.

JULY

This mule deer fawn, still sporting its camouflage of white spots, was born sometime in May or June. Fawns typically follow mature does until the following spring. Young bucks may be forced away by the adult females before that time.

The monarch is that one butterfly species that is so easily recognized from all the others. It's as common to many of us as a Western meadowlark singing on a fencepost or the waving of the white flag of a white-tailed deer in retreat.

SEPTEMBER

Bighorn sheep are found in western North Dakota in the rugged up and down landscape of the badlands. Bighorns are both browsers and grazers and gravitate to the grassy plateaus to feed on grasses, forbs and sedges.

OCTOBER

In the migration months in fall and spring, an uncountable number of snow geese make frequent stops in North Dakota, blanketing farm fields to rest and refuel for what remains of their annual passage to wintering and breeding grounds.

NOVEMBER

While white-tailed deer are found in all kinds of habitat across North Dakota and are as common as the chance of inclement weather on the Northern Plains, big mature bucks like this one certainly aren't as universal.

DECEMBER

Mink are semi-aquatic animals and find suitable habitat in close association with wetlands, lakes and rivers. The diet of this seemingly fearless furbearer is strictly meat, including small mammals, fish, crayfish, birds and frogs.
